With and w/o rate change			X
Loss Ratio Demonstration <sup>(f)</sup>	X (Min./Filed)	X (Min.)	X (Filed)
Actuarial Certification	X	X	X

- 
- <sup>a</sup> Each filing serves a different purpose. The annual rate and loss ratio filing must file the rates for approval and demonstrate loss ratio compliance with the minimum standards in the regulation. A new policy filing must describe the rate development and demonstrate compliance with minimum loss ratios. A rate revision filing must describe how and why the rate revision is requested and demonstrate compliance with originally filed loss ratios.
- <sup>b</sup> The rate revision filing must also indicate whether the policy is a closed block of business.
- <sup>c</sup> This should be shown both before and after the rate revision.
- <sup>d</sup> Alternatively, the data could be presented by calendar year of issue and calendar experience.
- <sup>e</sup> The national data need only be provided if the projections and/or rates are derived from national experience.
- <sup>f</sup> The loss ratio demonstration varies for each filing. The new form filing and annual filing must both demonstrate compliance with the minimum standards. Since the annual filing also covers approval of rates, it should also indicate the anticipated loss ratio when the policy form was filed. The new form filing must also illustrate the expected loss ratio for at least the first 10 years and indicate any variations by age.
